

FOR IMMEDIATE RELEASE

VIT ships new Under-Vehicle-Surveillance-System to International customer

Sterling, VA, March 10, 2005

Vehicle Inspection Technologies, a security products manufacturing firm based in Sterling, VA, today announced first deliveries of their newest "Und-Aware™" UVSS 400 Series product to the Kingdom of Saudi Arabia (KSA). This entirely new product line will be shown at FPED, April 26-28 in Quantico, VA.

Many of the product's features will prove especially useful in the KSA environment. AirWash™, VIT's patented lens cleaning system will remove the ever-present blowing dust and sand from the cameras and lights, allowing clear vehicle inspection no matter what the weather.

"The first challenge we faced in developing a truly usable UVSS was to make a system that worked no matter what the weather," said Bill Peterson, Und-Aware™ designer and company President. "The new 400 Series product family now clears both camera and light lenses insuring even better images."

Weather in Saudi Arabia can cause undue strain on components that already run "hot." For this reason, the "cool" white LED lights with a lifetime of up to 100,000 hours will keep maintenance to a minimum, a real concern to the Saudi's who lack convenient local sources for many service items.

About VIT

Vehicle Inspection Technologies is part of a 1972 corporation started by William Peterson, designer of myriad specialty security products for government and industry. The Und-Aware™ product family includes above- and below-ground, fixed and portable systems ranging from two to eight cameras to scan the full width of any size vehicle. Constantly upgraded product information is available from their web site at: [www.Und-Aware.com](http://www.Und-Aware.com)
