

Tire Shredding System

This portable, totally effective tire-shredding system will STOP the largest vehicle within a few feet. No shots need be fired; no barricades erected; deployment is fast and reliable on any road surface in any conditions.

Patented stainless-steel blades are rugged, yet easily replaced. They are stored in a protected rubber and steel housing and are deployed at the guard's discretion.

Typical deployment across a 4 meter traffic lane requires only a few modular, interlocking units that couple to a wired or wireless, battery powered control unit.

Tire shredding systems are controllable from the UndAware software and hardware and are easily integrated into the fixed or portable UndAware UVSS hardware.
